

BETA TESTERS NEEDED

EXPERIENCE POWER OF ACT ACADEMY AND
AMAZON ALEXA TO HELP STUDENTS MAXIMIZE
STUDY TIME AND BOOST LEARNING

ACT® Academy™ Better Learning With RAD API Plus Amazon Alexa

ACT® Academy™ is a free tool designed to help students quickly find and use the best resources for them. ACT Academy, boosted with our patent-pending Recommendations and Diagnostics (RAD) application programming interface (API) is now even more powerful with Amazon Alexa.

From the comfort of their home, students can ask “Alexa, how do I prepare for the ACT test?” Alexa, Amazon’s cloud-based voice service, will help guide students through the ACT test process and even receive test prep coaching through ACT Academy for free. Before registering for the ACT, students may ask Alexa what the test measures, when and where they may take it, and how much it costs. Following registration, Alexa can remind them of their test date and location, photo upload deadlines, what to bring on test day, acceptable calculators and test taking tips. The connection to ACT Academy will help students maximize their study time, access personalized recommendations to brush up on weaker academic areas and increase their core academic knowledge.

Transforming Learning Through Technology: RAD API

RAD API is the patent-pending state-of-the-art, real-time diagnostic engine behind the intelligent, educational content delivery platform, ACT Academy. As students take quizzes or tests in ACT Academy, the RAD API accurately diagnoses their knowledge level and continuously tracks their mastery of specific academic skills. Based upon the results, the RAD API recommends education resources, in real time, that address areas not yet mastered. As the student learns, RAD API learns about the student—and responds by delivering a personalized educational experience.

- Assesses students’ understanding of core academic concepts
- Aligns to any subject or set of standards (i.e. Common Core, ACT Holistic Framework, Next Generation Science Standards)
- Tracks granular skills that need additional support
- Shows students’ learning progression
- Recommends and delivers learning resources personalized to each student’s needs
- Scalable and fully integrates into any Learning and Assessment System (LAS)
